

Importance of Eye Exams

Annual eye exams are important for everyone, even if you have 20/20 vision.

The term “20/20” means you can read the smallest line on the eye chart, which is considered optimal vision acuity.

But, 20/20 vision doesn’t always equate to healthy eyes. Other important factors such as depth perception, eye coordination and side vision contribute to your overall ability to see well.

At your visit, your eye doctor will check your vision health and determine if you need corrective lenses. During the exam, the doctor will also look for signs of other health conditions such as:

Diabetes

High Blood Pressure

High Cholesterol

Glaucoma

Comprehensive Eye Exams vs. Vision Screenings

Comprehensive Eye Exam

A comprehensive eye exam is conducted by either an optometrist or ophthalmologist to diagnose and treat vision correction needs. The doctor will check the health of the eyes and any signs of other health issues.

Vision Screening

A vision screening is a quick, limited test used to alert you of possible vision problems. Screenings are typically performed by a school nurse, a pediatrician, or trained vision screener. A vision screening should not replace a comprehensive exam.
